

**OCES 3301 – Data Analysis in Ocean Science
Assignment Rubric**

Assessment Criteria	Exemplary (9-10)	Good (7-8)	Satisfactory (5-6)	Poor (0-4)
<u>Scientific presentation (40%)</u> - Outline of scientific question and - Outline of method - Description of results - Evaluation of result and linking to scientific principles	- Concise and to the point description of scientific question, supported by use of references as appropriate - Concise and to the point description of method - Concise and to the point description of results - Critically evaluating results against known scientific knowledge	- Description of scientific question, not necessarily concise and/or with minor technical issues - As above but for description of method - As above but for description of results - Some attempting at linking to scientific knowledge	- Description of scientific question, non-concise and/or with technical errors - As above but for description of method - As above but for description of results - Poor attempt at linking to scientific knowledge	Whatever in satisfactory column but worse
<u>Writing and presentation (30%)</u> - Scientific writing - Referencing - Document formatting etc.	- Concise, to the point, consistent/stylistic writing - Referencing style consistent and supports narrative - Zero to some minor grammar issues / typos - With appropriate layouts separating sections, text formatting for emphasising points etc.	- Writing not entirely concise, to the point and/or consistent, but largely understandable - Referencing style inconsistent and not entirely appropriate - Some grammar issues / typos - Poor layouts and text formatting etc.	- Writing that is confusing and/or understandable - Too long - No bibliography or referencing - Noticeable grammar issues / typos - Poor layouts and text formatting etc.	Whatever in satisfactory column but worse
<u>Jupyter + Python (30%)</u> Mostly Jupyter, less so of the coding aspect	- Concise Python code that is supporting the scientific narrative - Usage of Jupyter functionalities for supporting the presentation	- Overly verbose/long code that gets in the way of the text - Usage of Jupyter largely supporting the presentation, although sometimes getting in the way	- Convolved/wrong code - Weak usage of Jupyter functionalities that gets in the way of the presentation	Whatever in satisfactory column but worse

Surprise me (10%)

- Things outside of the course done well; extra things done badly is just things done badly and will negatively impact the above sections. This could be memes, extra analysis, analysis beyond the expected methodologies, creating reproducible and/or open access GitHub repositories for the assignment, others...
